

PRABHU PRASAD MISHRA

Bhubaneswar, Odisha, India | prabhu@email.com | +91- 9692839751 | [linkedin.com/in/prabhuprasad-mishra](https://www.linkedin.com/in/prabhuprasad-mishra) | github.com/prabhuprasad

PROFESSIONAL SUMMARY

Results-driven B.Tech student specializing in Artificial Intelligence and software engineering with 10+ months of combined internship experience across automation and edtech industries. Proven ability to build and deploy AI-powered systems, autonomous drone hardware, and full-stack JavaScript applications. Eager to contribute to large-scale, impact-driven engineering challenges at a world-class technology organization.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, java, HTML5, CSS3

Frameworks & Libraries: Node.js, React.js, Express.js, OpenCV, TensorFlow (basics), REST APIs, Next.js

AI & Machine Learning: Artificial Intelligence, Machine Learning, Computer Vision, Neural Networks, NLP, Prompt Engineering

Hardware & Robotics: Drone Design & Building, UAV Systems, Embedded Systems, Flight Controllers, Arduino, Sensor Integration

Tools & Practices: Git, GitHub, Linux, VS Code, Postman | Agile/Scrum, CI/CD, OOP, Code Review, Technical Documentation

PROFESSIONAL EXPERIENCE

Ridoxy Automation Private Limited

Software & Automation Engineering Intern

Bhubaneswar, India

August 2025 – Present

- Developed Python and JavaScript automation scripts that streamlined internal QA workflows, reducing manual testing effort by ~30% and improving release cycle speed.
- Collaborated with cross-functional teams to design and integrate AI-based decision modules into autonomous robotic systems, enhancing real-time operational efficiency.
- Engineered control algorithms for automated hardware platforms, improving system response accuracy and reducing fault rates during field testing.
- Maintained the internal codebase using Git with clean coding standards and peer-reviewed pull request workflows; authored onboarding documentation for automation pipelines.

Nobel Learning PBC

Technology Intern

Remote

May 2025 – February 2026

- Built and maintained interactive JavaScript learning modules deployed to thousands of students globally, driving a measurable increase in course completion rates.
- Leveraged AI tools to develop personalized content pathways, adapting curriculum delivery based on individual learner performance data and engagement signals.
- Implemented responsive UI features using React.js with design and product teams, improving cross-device accessibility and overall user satisfaction.
- Participated in bi-weekly agile sprint cycles, consistently delivering feature increments on schedule; resolved critical frontend bugs to stabilize the production environment.

PROJECTS

Autonomous Drone Navigation System | Python, OpenCV, Arduino, Flight Controller APIs

2024

- Designed, assembled, and programmed a custom UAV integrating flight controller firmware with a Python-based vision stack for real-time obstacle detection; implemented GPS-assisted waypoint navigation achieving stable autonomous flight.

AI-Powered Educational Chatbot | JavaScript, Node.js, Express.js, NLP APIs

2024

- Built a full-stack conversational AI chatbot integrating NLP APIs for context-aware student query resolution, deployed as a scalable web app with sub-second response latency and concurrent session support.

Smart Automation Monitoring Dashboard | React.js, Python, Flask, REST APIs

2023

- Developed a full-stack remote monitoring dashboard ingesting and visualizing live sensor data streams, enabling browser-based real-time control of automated hardware systems.

EDUCATION

Gandhi Institute for Technological Advancement (GITA)

Bachelor of Technology (B.Tech)

Bhubaneswar, Odisha

2023 – Present

- Coursework: Artificial Intelligence, Data Structures & Algorithms, Machine Learning, Computer Networks, Embedded Systems, Software Engineering, Operating Systems

College of Basic Science and Humanities, OUAT

Higher Secondary – Physics, Chemistry, Mathematics (Science Stream)

Odisha

Completed 2022

ACHIEVEMENTS & HIGHLIGHTS

- Built and flew a fully custom-designed drone from scratch – end-to-end hardware-software integration across mechanical assembly, firmware, and computer vision.
- Managed two concurrent internships while maintaining full-time academic enrollment in B.Tech; delivered production-grade AI and automation solutions across a robotics startup and a global edtech platform.
- LinkedIn Top Skills recognized in Artificial Intelligence, Drone Building, and JavaScript – reflecting cross-disciplinary strengths spanning software and hardware engineering domains.
